

ROSHAN KUMAR

+91 6205980916 ◇ Kolkata, India

roshankumar_2022@outlook.com · [LinkedIn](#) · [GitHub](#) · [LeetCode](#) · [Portfolio](#)

OBJECTIVE

Results-driven Full-Stack Developer with hands-on experience architecting and deploying production-grade web applications. Skilled in building scalable microservices, event-driven systems, and responsive user interfaces. Seeking a role where I can contribute to system design, backend services, and end-to-end product delivery.

EXPERIENCE

Assistant System Engineer

Tata Consultancy Services (TCS)

Oct 2024 – Present

Kolkata, India

- Completed structured onboarding training in **Java** and **Spring Boot**, covering REST API development, OOP principles, and enterprise application patterns.
- Tech:** Java · Spring Boot · SQL · JavaScript

EDUCATION

B.Tech in Computer Science & Engineering

Vinoba Bhave University, Hazaribagh

2021 – 2024

SKILLS

Languages	Java, C++, JavaScript, TypeScript	Databases	PostgreSQL, MongoDB, MySQL
Frontend	React.js, Next.js, Redux, Tailwind CSS	Infra	Docker, Kubernetes, AWS S3
Backend	Node.js, Express.js, Spring Boot	Tools	Kafka, Socket.io, Git, Postman

PROJECTS

- Pizza Delivery Platform** mern-pizza-app.cyou
Production-grade, multi-tenant pizza ordering platform built across **5 independently deployed Node.js microservices**.
 - Architected **role-based authentication** (Admin / Manager / Customer) in a dedicated Auth Service backed by **PostgreSQL**; implemented JWT access + refresh token rotation with HTTP-only cookies; downstream services validate tokens locally via shared secret, removing Auth Service as a synchronous dependency.
 - Built an **event-driven product price cache** in Order Service by consuming **Apache Kafka** events published by Catalog Service — eliminating cross-service HTTP calls at checkout and ensuring price integrity even during Catalog downtime.
 - Integrated **Stripe PaymentIntent** API with webhook signature verification (POST /payments/webhook); order status transitions to PAID only after cryptographic confirmation, preventing duplicate charges.
 - Deployed on **AWS EKS** managed by **ArgoCD v3.3.2** (GitOps); GitHub Actions builds Docker images on push and updates manifests; NGINX Ingress handles SSL termination, CORS, and path-based routing; frontends deployed on **Vercel**.
 - Tech:** Node.js · PostgreSQL · MongoDB · Apache Kafka · Stripe · Socket.io · AWS S3 · Kubernetes · Docker · ArgoCD · NGINX · Next.js · React

github.com/roshan798/pizza-delivery-app

- VoiceHub** Real-time Group Voice Calling App
Designed and built a browser-based group voice calling platform supporting multi-user rooms with peer-to-peer audio.

- Implemented **WebRTC** mesh networking for low-latency, peer-to-peer audio streaming; used **Socket.IO** for signalling, room lifecycle events, and user presence updates.
- Built a **React** SPA frontend with dynamic room management UI and a **Node.js + Express** REST backend with **MongoDB** for user and room persistence.

ACHIEVEMENTS

- Achieved **1750+ contest rating** on LeetCode; participated in **56+ contests** and ranked in the **global top 1300** in Weekly Contest 376.
- Solved **600+ problems** across [LeetCode](#), [GeeksForGeeks](#), and [HackerRank](#).
- Earned **6-star Gold** badge in HackerRank Problem Solving.
